

DHAYAL S R

Data Analytics | SQL | Python | Google Sheets | B.Tech Graduate, 2025

Coimbatore, Tamil Nadu, India | +91-9629764124 | dhayal1107@gmail.com | github.com/Dhayalramesh | linkedin.com/in/dhayalramesh

PROFESSIONAL SUMMARY

Data analytics graduate with hands-on experience using SQL, Python, spreadsheets, and visualization tools to clean and validate data, identify patterns, and communicate actionable business insights. Completed an AI engineering internship and delivered analytics projects in customer retention, e-commerce behavior, and marketing performance. Currently pursuing an M.Tech in Data Science and AI.

EDUCATION

M.Tech — Data Science and AI | IIIT Dharwad | CGPA: 7.93

2025 – 2027 (Pursuing)

B.Tech — AI & Data Science | Sri Eshwar College of Engineering | CGPA: 6.7

Graduated 2025

TECHNICAL SKILLS

- **Data Analysis:** Data cleaning, validation, exploratory analysis, statistical analysis, anomaly detection, RFM segmentation, A/B testing
- **Programming:** SQL, Python; working knowledge of R
- **Spreadsheets & BI:** Google Sheets, Tableau, Looker Studio, dashboard design, data storytelling
- **Libraries & Tools:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, PostgreSQL, SQLite, BigQuery, Jupyter Notebook, Git, Google Workspace

PROFESSIONAL EXPERIENCE

AI Engineer Intern | Conzeptt Sparx Private Limited, Remote

April 2026 – June 2026

- Cleaned and analyzed client datasets using Python and Pandas, applying data-quality checks, feature engineering, and model validation before analysis and model development.
- Evaluated machine-learning models and documented trends, assumptions, and findings to improve the reliability of technical recommendations.
- Translated business requirements into analysis tasks and shared data-backed recommendations with product and engineering stakeholders in an agile workflow.

PROJECTS

Customer Churn Prediction & Retention Strategy | Python, SQL, Tableau, Scikit-learn

- Analyzed 7,000+ telecom customer records [dataset] to identify relationships between churn, tenure, contract type, and monthly charges [analysis].
- Built and evaluated a Random Forest classifier [tool] with 82% accuracy [measurable result]; identified month-to-month contracts, tenure under one year, and charges above \$70 as major churn indicators.
- Created an interactive Tableau dashboard [deliverable/documentation] and proposed targeted retention actions for high-risk customer segments. GitHub: github.com/Dhayalramesh/churn_analysis

E-Commerce Sales & Customer Behavior Analysis | Python, SQL, Looker Studio, RFM Analysis

- Queried and analyzed 100,000+ transactions [dataset] to evaluate purchasing patterns, seasonality, repeat behavior, and revenue drivers [analysis].
- Performed RFM segmentation [analysis method] and found that the top 10% of customers generated approximately 40% of revenue [measurable result]; identified 15 potential product bundles for cross-selling.
- Presented findings through a Looker Studio dashboard [deliverable/documentation] and recommended segment-specific retention and bundling campaigns.

Marketing Campaign Performance & ROI Analysis | Python, SQL, Google Sheets, Statistical Analysis

- Analyzed 2,000+ customer records across five campaigns [dataset] and calculated acceptance rate, cost, revenue, and ROI by campaign and customer segment [analysis].
- Identified the strongest campaign at 15.2% acceptance and 245% ROI [measurable result], then developed a budget reallocation scenario [deliverable] with documented assumptions and expected impact [documentation].

PUBLICATIONS & LEADERSHIP

- **Publications:** Co-authored three IEEE conference papers on traffic-flow prediction, deepfake detection, and web-vulnerability assessment (2024–2025).
- **Leadership:** Captained the school football team in district-level tournaments and represented an Indian club at the Gothia Cup in Sweden and Denmark.

LANGUAGES

English – Professional Proficiency | Tamil – Native | Hindi – Conversational
